ABSTRACT
This article describes the current issues, the effective use of advanced pedagogical technologies, the organization of a quality educational process. New reforms in education, effective methods, modeling of international educational standards, in short, the improvement of education in our country are covered.
Keywords: *Education, technology, innovation, skill, educator, international standard.*

1. Introduction

Education is rising to a new level, students' horizons are expanding, information is becoming easier, the use of innovative technologies in teaching in such a growth process reduces the quality and level of education. Innovation - (in english) means innovation, and technology is derived from the Greek words "technos" art, skill and "logos" - science. Innovative technologies are innovations in the pedagogical process and in the activities of teachers and students. 'is to make changes. When using innovative technologies, the teacher is required to know the following:

- Knowledge, skills and competencies in information and communication technologies;
- Knowledge of foreign experience in new pedagogical technologies;
- Ability to use didactic games, interactive methods in the organization of the educational process;
- Knowledge of innovations, knowledge on advanced pedagogical technologies;
- The formation of technology for the transformation of knowledge into skills and competencies;
- Effective use of movement games in the classroom;
- Connect the lesson to the Internet as much as possible;

2. Main part

Today, the main task in education is to improve the quality of education, to bring it up to international standards, to increase the scientific potential of young people. Reforming the system of continuing education in the Republic of Uzbekistan, improving the quality of education is aimed at shaping the future generation of high professional culture, creative and social activism, independent participation in socio-political life, free thinking. In the process of teaching science in schools, lyceums and other educational institutions of higher education, it is necessary to use innovative methods that help students to become interested in the subject, to develop independence and activism, to develop logical thinking. suitable. The use of innovative technologies in education is a cornerstone of our time. After all, logical thinking based on innovative technologies is one of the most important factors in the development of continuing education. They are manifested in a holistic system of various initiatives and innovations that lead to certain changes in the educational process, enriching the content, quality and effective organization of education. Today, the rapid development of science, science and technology, the penetration of new techniques and technologies in all segments of society, the use of information technology in all governmental and non-governmental institutions require continuous education of teachers. The work of teachers is multifaceted and they will have to play the roles of manager, communicator, mentor, organizer and evaluator.

"Innovative education" is usually defined as the introduction of new (useful) elements into the learning process. Therefore, innovation in the education system is directly related to change. Such changes in the education system:

- purpose, content, method, technology, form of organization and management system;
- originality of pedagogical activity and organization of the learning process;
- education monitoring and evaluation system;
- educational and methodical support;
- to the system of educational work;
- curricula and study programs;
- depending on the activities of the student and the teacher.

Today, the demand for teaching and learning foreign languages has greatly increased. The old method of teaching foreign languages, the use of methods leads to a significant slowdown in the development of the quality of education. The use of new innovative technologies in foreign language teaching is in line with both the increase in quality and the requirements of international standards. It is advisable to learn languages not only

from books, but also from video-audio textbooks, visual aids, Internet information. There is a saying among our wise people, "It is better to see once than to hear a thousand times."

In today's society, culture and education, the need for teacher innovation is measured by:

• Socio-economic modernization requires a radical overhaul of the education system, methodology and technology of the educational process. In this context, the teacher's innovation activity consists of creating, mastering and using pedagogical innovations;

• Humanization of educational content requires constant search for new organizational forms and technologies of teaching;

• a change in the attitude of the teacher to the acquisition and implementation of pedagogical innovations.

The implementation of innovation takes place in innovative processes. The innovation process is the process of preparing for and implementing innovative change. The author also notes that innovative changes in the educational process, the introduction of any innovations in the education system is carried out directly through the renewal and transformation of the teaching profession. There is an opportunity to define the concept of innovative activity through the analysis of innovations in the education system, their implementation, management of innovation processes. Innovative activity is a driving force, motivating and developing the pedagogical team. "Innovative activity is an activity aimed at solving complex problems that arise as a result of incompatibility of traditional norms with new social requirements, or the collision of a new emerging norm of practice with the existing norm," said V.I.Slobadchikov. Innovative activity is an important part of practice and theory, a system of action of social actors aimed at improving the quality of the socio-cultural object, which is based not only on the ability to solve certain problems, but also on motivational training to solve problems in any situation. to have. The central issue of innovative teacher activity is the effective organization of the educational process.

Innovative activity is a continuous work on the basis of innovations, which is formed and improved over a long period of time.

3. Conclusion

It is important today to identify advanced educational innovations, their effective organization, testing, implementation in pedagogical practice, the creation of a system for the development and implementation of scientific conclusions. From this point of view, it is expedient to create a number of researches and methodological aids in this regard. It is necessary to strengthen teaching in education with new technologies and try to improve its overall effectiveness through a systematic approach.
